## PRODUCT OVERVIEW

FloodSax are lightweight, flat and absorbent and can be used inside homes and businesses to stop internal escapes of water or outside to prevent floodwater getting in. FloodSax® sales worldwide are now around 3 million.

## BENEFITS

- Space-saving to store and quick and easy to deploy.
- Instant flood protection day and night.
- 5-year shelf life.
- Way more environmentally friendly than sandbags.
- Largely biodegradable by weight.

## FLOODSAX IN ACTION

## CAPABILITIES/APPLICATIONS

FloodSax are very flat with a large surface area so the gelling polymer inside them is ideal at soaking up internal escapes of water, leaks and spills, often in the most inaccessible places such as beneath boilers, underneath floorboards and below pipes. Use them outside as alternative sandbags to halt or divert floodwater.

## HOW THEY WORK AGAINST FLOODWATER

Immerse FloodSax in water and they will absorb and retain around 20 litres in minutes so the FloodSax becomes an instant sandless sandbag. Their uniform shape makes them ideal to build into temporary flood barriers.
